[Flyweight Design Pattern Tutorial](#)

Posted by [Derek Banas](#) on Oct 12, 2012 in [Java Video Tutorial](#) | [8 comments](#)

Welcome to my Flyweight Design Pattern Tutorial! The flyweight design pattern is used to dramatically increase the speed of your code when you are using many similar objects.

To reduce memory usage the flyweight design pattern shares Objects that are the same rather than creating new ones. In this tutorial, I'll create 100,000 rectangles and show you the difference in speed versus creating unique rectangle objects versus the flyweight design. The code follows to help you learn.

If you like videos like this it helps to tell Google [googleplusone]
