1. Say, you have a employees table as below

FIRST_NAME	LAST_NAME	EMPLOYEE_ID	DEPT_ID	SALARY
Fardin	Saad	1	2	110
Mezbaur	Rahman	2	2	130
tasnim	Ahmed	3	2	330
Shahriar	Ivan	4	2	230
Anas	Jawad	5	1	530
Bakhtiar	Ahmed	7	3	700

And a dept table as below:

DEPT_ID	DEPT_NAME
1	CSE
2	MCE
3	EEE
4	CEE

Write a SQL query to find employees who earn the top three salaries in each of the department. For the above tables, your SQL query should return the following rows (order of rows does not matter).

DEPT_NAME	FIRST_NAME	LAST_NAME	SALARY
MCE	Mezbaur	Rahman	130
MCE	tasnim	Ahmed	330
MCE	Shahriar	Ivan	230
CSE	Anas	Jawad	530
EEE	Bakhtiar	Ahmed	700
